10	<p><!-- Predictable performance is a key design goal for AMP HTML. Primarily we are aiming at reducing the time until the content of a page can be consumed / used by the user. In concrete terms this means that:</p> <ul style="list-style-type: none"> • HTTP requests necessary to render and fully layout the document should be minimized. • Resources such as images or ads should only be downloaded if they are likely to be seen by the user. (i.e. Above the fold) • Browsers should be able to calculate the space needed by every resource on the page without fetching that resource. • Anchor href attribute value must not begin with javascript:. If set, the target attribute value must be _blank. --> <h1>Mozart's Music Match</h1> <p> Are you a musical genius? <amp-img src=sample.jpg width=300 height=300></amp-img> </p> <amp-ad width=300 height=250 type="a9" data-aax_size="300x250" data-aax_pubname="test123" data-aax_src="302"> </amp-ad>	<div id="content"></div>
11	<p>Display an iframe in your page using the amp-iframe element.</p> <p>Iframes are especially useful in AMP to display content not supported in the main page context, such as content requiring user-authored Phaser JavaScript Game Framework.</p> <p>amp-iframe requirements:</p> <p>Iframes must be either 600px away from the top or not within the first 75% of the viewport when scrolled to the top – whichever is smaller. This example might not work depending on your screen width. In that case it will only show a loading indicator.</p> <p>Can only request resources via HTTPS, and they must not be in the same origin as the container, unless they do not specify allow-same-origin.</p>	<script src="scripts/phaser.min.js"></script> <script src="scripts/game.js"></script>
